As a Software Development Engineer, I specialize in Java development, Machine Learning with Python, and automation testing. I'm eager to grow by learning about procurement solutions, excited to understand how technology can make supply chains smarter and strengthen end-to-end enterprise projects.

EXPERIENCE:

Programmer Analyst Trainee – Cognizant Technology Solutions | 05/2025 – Present

- Developed comprehensive testing scripts in **Java** to validate application functionality, ensuring high-quality deliverables throughout the software development lifecycle.
- Automated complex test scenarios using **Selenium** and **TestNG**, streamlining manual testing efforts and enabling efficient regression testing and reporting across multiple builds.
- Implemented Behavior-Driven Testing (**BDT**) frameworks with **Cucumber**, facilitating collaboration between teams and enhancing clarity by writing test cases in plain, business-readable language.
- Strengthened skills in industry-standard automation tools and agile workflows, consistently contributing to faster releases and improved software reliability in a dynamic project environment.

Software Development Intern – Sparken IT Solutions Pvt. Ltd | 02/2024 – 08/2024

- Contributed to the complete development of an ATMS/EMS website from the ground up, gaining experience in planning, designing, coding, and deploying a real-world web application in a professional environment.
- Gained hands-on experience in PHP programming by developing and optimizing backend logic, writing clean and reusable code, and working with databases to ensure smooth functionality of the application.
- Implemented the Yii2 framework to enhance scalability, maintainability, and performance of the project, while also deepening understanding of MVC architecture, secure coding practices, and framework-based development.

PROJECTS:

• **Jumping Pig**

Tech Stack: Core Java , AWT , Swing, Html,Bootstrap:

- Created a graphically interactive game inspired by Flappy Bird, achieving a consistent **60 FPS** and **<50ms input latency** to ensure highly responsive and engaging gameplay.
- Applied core Java concepts to implement fundamental programming principles, reducing code redundancy by **20%** through a modular, object-oriented architecture.
- Gained hands-on experience with GUI development, designing custom frames and panels that maintained a low memory footprint of under **120MB** during active play.
- Utilized Java Swing and AWT libraries to develop a visually appealing interface, incorporating **multi-threaded rendering** to prevent UI freezing during high-intensity game states..

• **Sentiment Analyser**

Tech Stack: Python,Numpy,Pandas,Sklearn,Google Collaboratory

- Developed a machine learning model to perform sentiment analysis on **10,000+ text samples**, achieving a classification accuracy of **88%** across diverse datasets.
- Implemented robust data cleaning and preprocessing pipelines using Pandas, reducing raw data noise and improving model training speed by **35%**.
- Utilized Scikit-learn for feature extraction and predictive modeling, attaining an **F1-score of 0.86** by balancing precision and recall for multi-class sentiment tasks.
- Designed and optimized efficient Python code for scalable classification, resulting in a **40% reduction in execution time** during the inference phase.
- Leveraged Google Colaboratory cloud environment to handle computationally intensive processes, accelerating model hyperparameter tuning by **3x** through parallel processing.

TECHNICAL SKILLS:

- **Backend:** SpringBoot.
- **GUI:** Swing, Awt.
- **DevOps:** Docker,Kubernetes,Jira,Jenkins.
- **Database:** MySql,PostgreSql
- **ML and AI:** Pytorch, Numpy, Pandas.
- **Languages:** Python,Java,PHP.

EDUCATION: B.tech | Computer Science Engineering | Manipal University Jaipur | 2020-2024
